

Product no **AS05 084A****PsbA | D1 protein of PSII, C-terminal (affinity purified)****Product information**

<b>Immunogen</b>	KLH-conjugated synthetic peptide derived from available plant, algal and cyanobacterial PsbA sequences, including <i>Arabidopsis thaliana</i> UniProt: <a href="#">A4QJR4</a> , TAIR: <a href="#">AtCg00020</a> , <i>Oryza sativa</i> <a href="#">P0C434</a> , <i>Populus alba</i> <a href="#">Q14FH6</a> , <i>Physcomitrella patens</i> <a href="#">Q6YXN7</a> , <i>Chlamydomonas reinhardtii</i> <a href="#">P07753</a> , <i>Synechocystis</i> sp. <a href="#">P14660</a> and many others
<b>Host</b>	Rabbit
<b>Clonality</b>	Polyclonal
<b>Purity</b>	Immunogen affinity purified serum in PBS pH 7.4.
<b>Format</b>	Lyophilized
<b>Quantity</b>	50 µg
<b>Reconstitution</b>	For reconstitution add 50 µl of sterile water
<b>Storage</b>	Store lyophilized/reconstituted at -20°C; once reconstituted make aliquots to avoid repeated freeze-thaw cycles. Please remember to spin the tubes briefly prior to opening them to avoid any losses that might occur from material adhering to the cap or sides of the tube.

<b>Additional information</b>	Due to biology of PsbA (D1) protein a number of degradation products can appear in a sample and may be observed when using anti-PsbA antibodies, including products having apparent molecular weights of 24kDa and 16kDa. D1 degradation is a complex set of events and the products observed can be influenced by both the extraction procedure and the physiology of the cells prior to harvest. Third, cross-linking may occur between D1 and cytochrome b559, shifting the protein higher in the gel. In cyanobacteria (PCC7942), three different bands were competed out by preincubating the antibody with the PsbA free peptide, indicating that all bands are indeed PsbA and its precursors or breakdown products. Competition assays were also performed with spinach and <i>Chlamydomonas</i> , confirming the identity of PsbA bands.  Anti-PsbA antibodies will not detect D2 protein, as the peptide used to generate PsbA antibodies has no homology to the D2 sequence.
-------------------------------	---

**Application information**

<b>Recommended dilution</b>	1 : 15 000 (WB)
<b>Expected   apparent MW</b>	38   28-30 kDa
<b>Confirmed reactivity</b>	<i>Anabaena</i> 7120, <i>Arabidopsis thaliana</i> , <i>Artemisia annua</i> , <i>Arundo</i> sp., <i>Chlamydomonas reinhardtii</i> , <i>Colobanthus quitensis</i> Kunt Bartl, <i>Craterostigma</i> sp., <i>Coscinodiscus wailesii</i> , <i>Cynara cardunculus</i> var <i>altilis</i> , <i>Ditylum brightwellii</i> , <i>Glycine max</i> , <i>Hordeum vulgare</i> , <i>Lindernia</i> sp., <i>Miscanthus x giganteus</i> , <i>Marchantia polymorpha</i> (liverwort), <i>Nicotiana benthamiana</i> , <i>Panicum miliaceum</i> , <i>Panax ginseng</i> , <i>Panicum maximum</i> , <i>Paulinella chromatophora</i> (amoeba), <i>Pinus strobus</i> , <i>Physcomitrium patens</i> , <i>Prochlorococcus</i> sp. (surface and deep water ecotype), <i>Synechococcus</i> sp. PCC 7942, <i>Spirodela polyrhiza</i> , <i>Symbiodinium</i> sp., <i>Zea mays</i>
<b>Predicted reactivity</b>	Algae (brown and red), <i>Brassica napus</i> , Conifers, Cyanobacteria, Dictos, <i>Cannabis sativa</i> , <i>Galdieria sulphuraria</i> , <i>Lactuca sativa</i> , <i>Lycopersicon esculentum</i> , <i>Medicago sativa</i> , <i>Nannochloropsis</i> sp., <i>Oryza sativa</i> , <i>Ostreococcus</i> sp. <i>Pisum sativum</i> , <i>Porphyridium purpureum</i> , <i>Sesamum indicum</i> , <i>Thalassiosira pseudonana</i> , <i>Zosteria marina</i> , <i>Vitis vinifera</i> cellular [compartment marker] of thylakoid membrane  Species of your interest not listed? <a href="#">Contact us</a>
<b>Not reactive in</b>	No confirmed exceptions from predicted reactivity are currently known
<b>Additional information</b>	The antibody is appropriate for detecting both, 24 kDa or the 10 kDa C-terminal fragments, whichever is generated under given treatment conditions. In our analysis we have seen both, ca. 24 kDa and ca. 10 kDa fragments from different samples, depending on treatments and isolation procedures.  Rabbit anti-PsbA antibody can detect more than one band of PsbA protein, e.g. precursor and mature protein as compare to the hen anti-PsbA antibodies AS01 016.  This antibody will detect the phosphorylated form of D1 as an alternate band to the main band on a high resolution gel.  The antibody will bind to cross-linked proteins: D1/D2, D1/cyt b559, D1/CP43.

## Application example

2 µg of total protein from samples such as *Arabidopsis thaliana* leaf (1), *Hordeum vulgare* leaf (2), *Chlamydomonas reinhardtii* total cell (3), *Synechococcus* sp. PCC7942 total cell (4), were extracted with Protein Extraction Buffer PEB ([AS08\\_300](#)). Samples were diluted with 1X sample buffer (NuPAGE LDS sample buffer (Invitrogen) supplemented with 50 mM DTT and heat at 70°C for 5 min and kept on ice before loading. Protein samples were separated on 4-12% Bolt Plus gels, LDS-PAGE and blotted for 70 minutes to PVDF using tank transfer. Blots were blocked immediately following transfer in 2% blocking reagent or 5% non-fat milk dissolved in 20 mM Tris, 137 mM sodium chloride pH 7.6 with 0.1% (v/v) Tween-20 (TBS-T) for 1h at room temperature with agitation. Blots were incubated in the primary antibody at a dilution of 1: 10 000 (in blocking reagent) for 1h at room temperature with agitation. The antibody solution was decanted and the blot was rinsed briefly twice, and then washed 1x15 min and 3x5 min with TBS-T at room temperature with agitation. Blots were incubated in secondary antibody (anti-rabbit IgG horse radish peroxidase conjugated, recommended secondary antibody [AS09\\_602](#), Agrisera) diluted to 1:25 000 in blocking reagent for 1h at room temperature with agitation. The blots were washed as above. The blot was developed for 5 min with ECL detection reagent according to the manufacturer's instructions. Images of the blots were obtained using a CCD imager (VersaDoc MP 4000) and Quantity One software (Bio-Rad). Exposure time was 30 seconds.
